

Abstract

The present invention relates to carboxylic acid amides of general formula

wherein

$\text{R}_1$  to  $\text{R}_5$ ,  $\text{Ar}$ ,  $m$  and  $n$  are defined as in claim 1, the tautomers, stereoisomers, mixtures thereof, the prodrugs and the salts thereof which have valuable properties.

The compounds of the above general formula I wherein  $\text{R}_5$  denotes a cyano group are valuable intermediate products for preparing the other compounds of general formula I, and the compounds of the above general formula I wherein  $\text{R}_5$  denotes one of the amidino groups mentioned in claim 1 have valuable pharmacological properties, particularly an antithrombotic activity and a factor Xa-inhibiting activity.
